

Data 227 - Autumn 2021 HW 4
Data Visualization and Communication - Trimble
Due: Tuesday, November 16, 2021 12:00pm (noon)

Homework 4, Geographical visualization

1. For this assignment, make at least one map that displays at least 20 data items. Interesting questions or interesting results are worth something. Choropleth or multiple-pie-charts are sensible options, but there are other ways to encode data on a map.

Include a figure caption and just one paragraph discussing your findings and the graphical design. Attach any code you used to produce the visualization. The figure caption should describe the origin of the dataset.

You do not have to use any specific tools to produce the visualization (you could even draw it by hand) but you need to find something interesting and display it effectively.
